Pablo Martin Perez

Python Developer - Full Stack Developer

About Me

I started working as a video technician in the audiovisual area and as technical support for TV production companies, but my curiosity led me to explore new knowledge in IT areas. I am passionate about technology and innovation, consistently seeking to expand my knowledge and skills to enhance my work and advance my professional growth. I have studied Python, data analysis, and SQL, and I have a solid understanding of Java, JavaScript, WordPress, HTML, and CSS. Currently I'm pursuing a degree in Systems Analysis and Development. I am highly responsible, detail-oriented, and a collaborative team player. I thrive on challenges and always open to new opportunities.

Work Experience

☑ Python Developer | Freelance — 2019-2024

- Development of automation systems in Python for manual tasks, including the creation of desktop applications with graphical user interface (GUI). - Implementation of an automated system for Western Union in the back-office sector, using Python to process a database containing all monthly transactions from 162 correspondents. - Creation of a script that separates the data by correspondent, saves each file in separate folders and performs automated calculations of the commissions to be paid, including the 10% deduction for marketing to be discounted in the following month. - Optimization of the process, reducing the execution time from 5 hours manually in Excel to just 5 minutes with the new automated system.

☑ Web Developer | Freelance — 2015 - 2018

- Maintenance and development of systems: I updated and maintained systems using HTML5, CSS3, JavaScript and React, ensuring the implementation of the best coding and optimization practices to guarantee the performance and responsiveness of the systems.

☑ Technical Support | Maclen — 2006 - 2015

- Daily registration and monitoring of tickets, ensuring efficient resolution according to customer demands. - Proactively identifying and solving problems in the systems used by the company. - Performing regular queries in databases for technical support and fault diagnosis. - Providing specialized service via help desk, ensuring agile and effective support to users.

Education

☑	**Systems Analysis and Development** Estácio	2024-2027
